

HOST DEVICE, IMAGE DISPLAY DEVICE, IMAGE DISPLAY SYSTEM,  
IMAGE DISPLAY METHOD, PANEL ATTRIBUTE READING-OUT METHOD  
AND IMAGE DISPLAY CONTROL METHOD

5

ABSTRACT OF THE DISCLOSURE

To make it possible to execute the same application  
regardless of the number of connected panels even in a  
multi-panel environment. A host system, which transfers an  
image signal to a plurality of panels connected thereto,  
10 comprises: a panel ID recognition section for recognizing a  
panel ID of a single panel or a predetermined number of  
collected panels as a unit; a window ID allocation section  
for allocating a window ID to a window which is a transfer  
processing unit of the image signal; a control signal  
15 output section for outputting a control signal used for  
setting a window ID to be processed to the panel ID to be  
read out in transferring the image signal; and an image  
signal transfer section for adding the window ID allocated  
by the window ID allocation section to the image signal,  
20 thus transferring the image signal.
